

Litmus Prosecution Data Tool

Advancing Fairness and Transparency in Prosecution

Prosecution Data Insights, In Real Time

The Litmus Prosecution Data Tool provides an easier way for prosecutors to access the data they need to make good decisions. The tool calculates and visualizes key metrics for prosecutors in real time. It enhances prosecutors' ability to engage with their data, make fairer and evidence-based decisions, and act more transparently. By enabling prosecutors to immediately access priority information and displaying key metrics over defendant characteristics, such as race and ethnicity, it automates checks on systemic problems, including flagging disparities where they exist.

----- FEATURES OF THE TOOL -----

Data visualizations

Case management

Customizable settings

Automated alerts

Data trends

Data cleaning

Litmus promotes innovation in the public sector, working with public agencies and the people they serve, to improve the performance of the public sector.
